Forest functions and ecosystem services

- Every decision made in forestry has and impact to different issues:
 - economical (timber production, livestock, hunting, etc.)
 - environmental (soil erosion, biodiversity conservation, carbon sequestration, etc.) and
 - social (recreational activities, level of employment, population settlement, etc.) (Diaz-Balteiro and Romero, 2008).
- Therefore, forest management planning has great impact to the different sectors and society as a whole.

Case studies

- Pedunculate oak (*Quercus robur*) and European beech (*Fagus sylvatica*)
- Different management regimes
- Different ecology

Strict nature reserve "Stara Vratična", I category

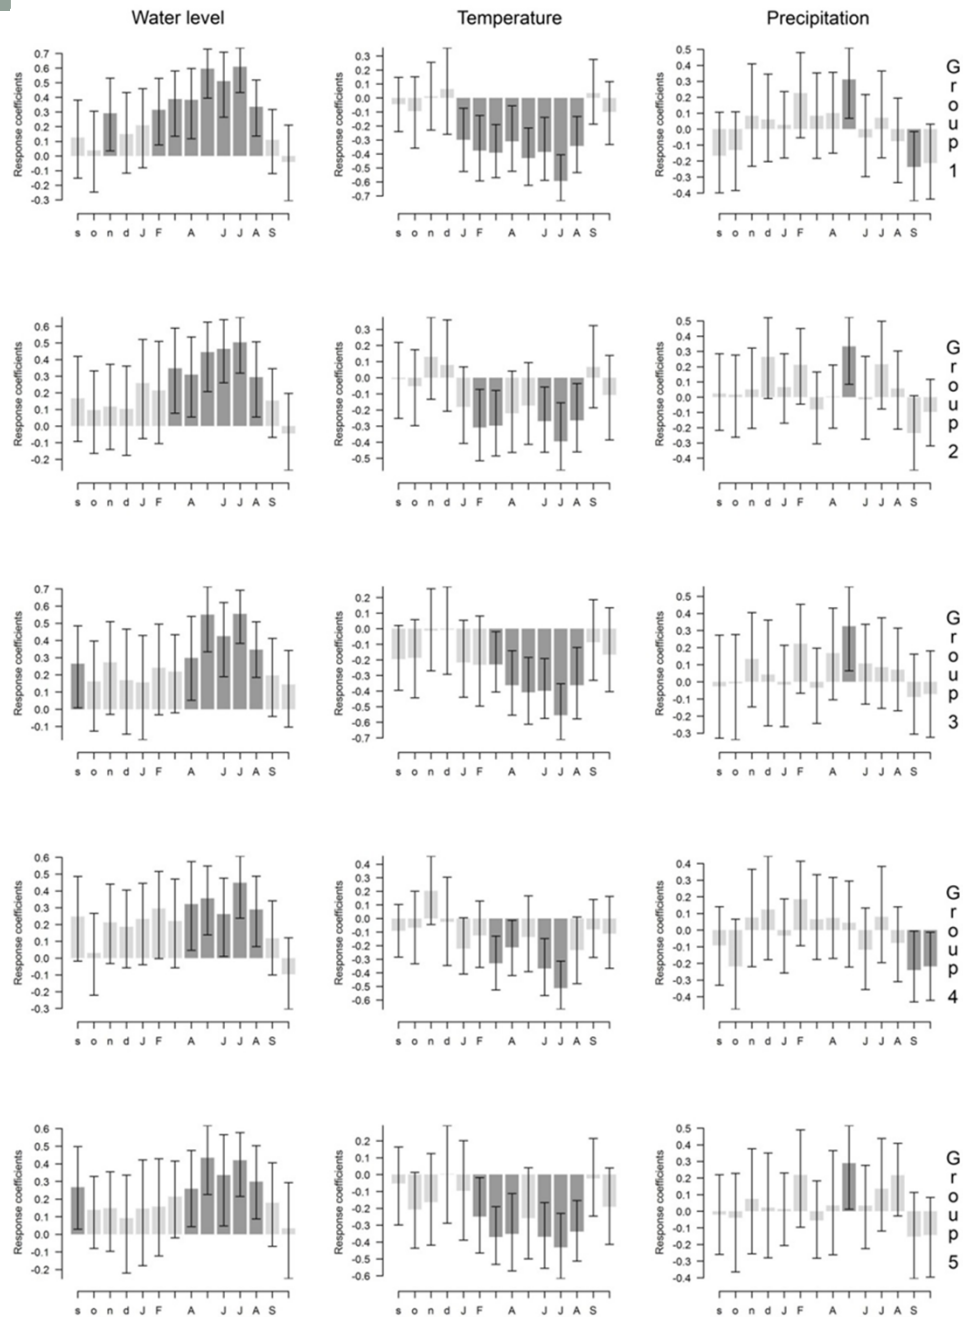

Old tree with diameter of 210cm at breast height (Smogva)

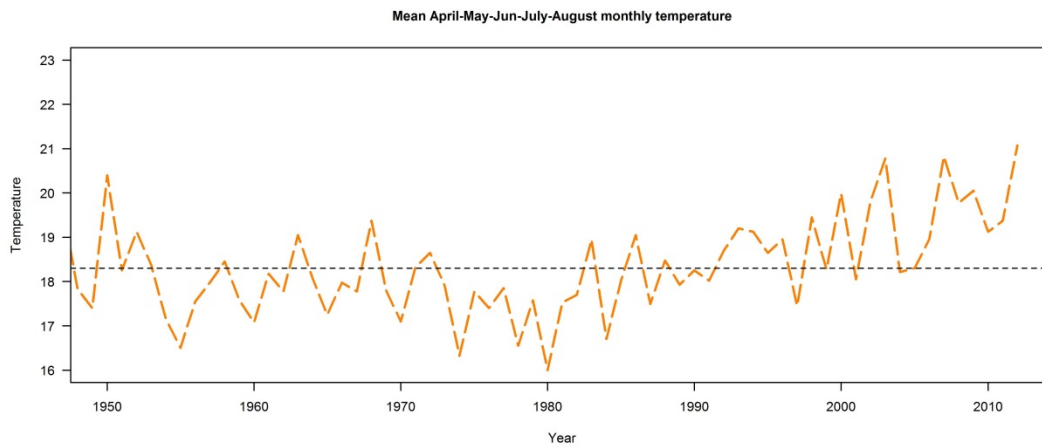

Tree-ring widths of five tree groups for the period 1951-2012

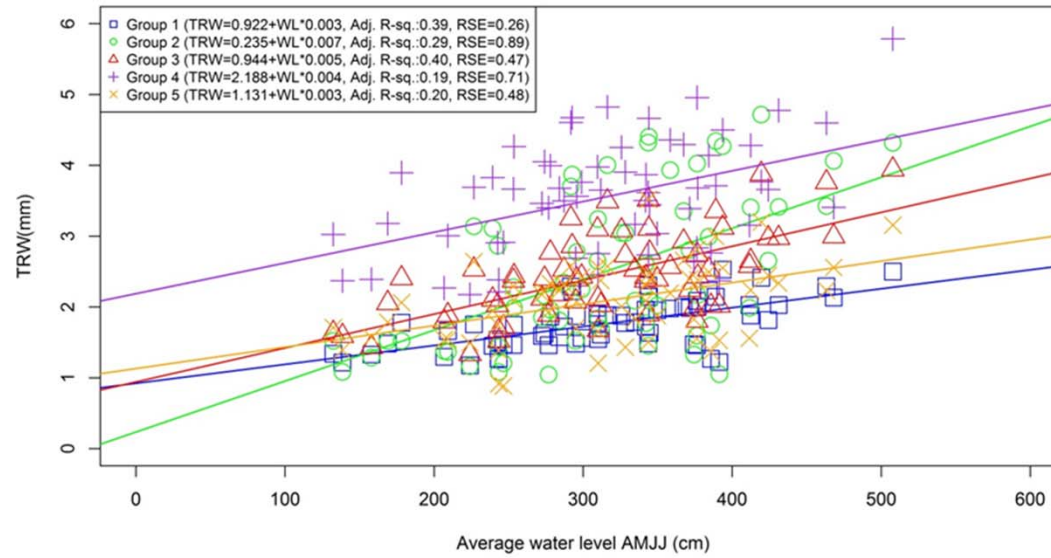

- Simple Pearson's correlation between TRW (std.) and water level, temperature and precipitation (left to right) for five tree categories (up to down) for the period 1951-2012 (small letters represent the previous year and capital the year of the growth). Dark colour represents bootstrapped correlations significant at $p < 0.05$ ($n=62$).

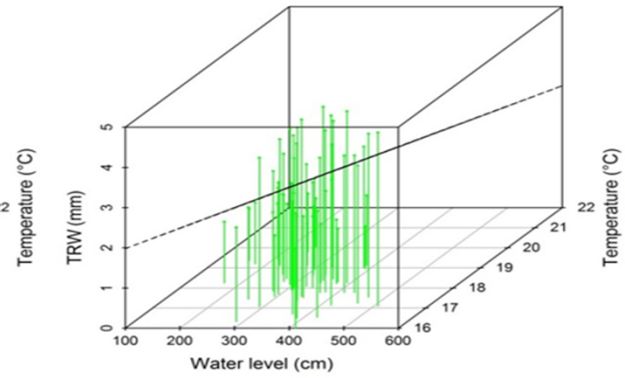

Changes in average monthly water levels for two time periods (1951-1981 and 1982-2012)

Group 1 (TRW=3.303+WL*0.002-T*0.113, Adj. R-sq.:0.45, RSE=0.25)

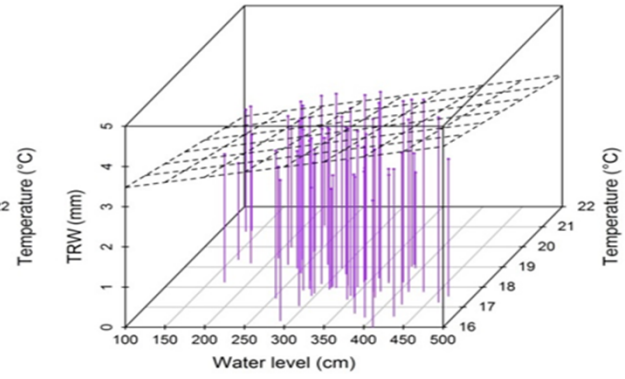

Group 2 (TRW=5.401+WL*0.005-T*0.245, Adj. R-sq.:0.32, RSE=0.88)

Group 3 (TRW=5.537+WL*0.003-T*0.218, Adj. R-sq.:0.47, RSE=0.44)

Group 4 (TRW=6.488+WL*0.002-T*0.204, Adj. R-sq.:0.22, RSE=0.70)

Group 5 (TRW=5.461+WL*0.001-T*0.206, Adj. R-sq.:0.28, RSE=0.46)

European beech

European beech

- Current forests, as well as those that are planted today, will be exposed to drastically different climate conditions.

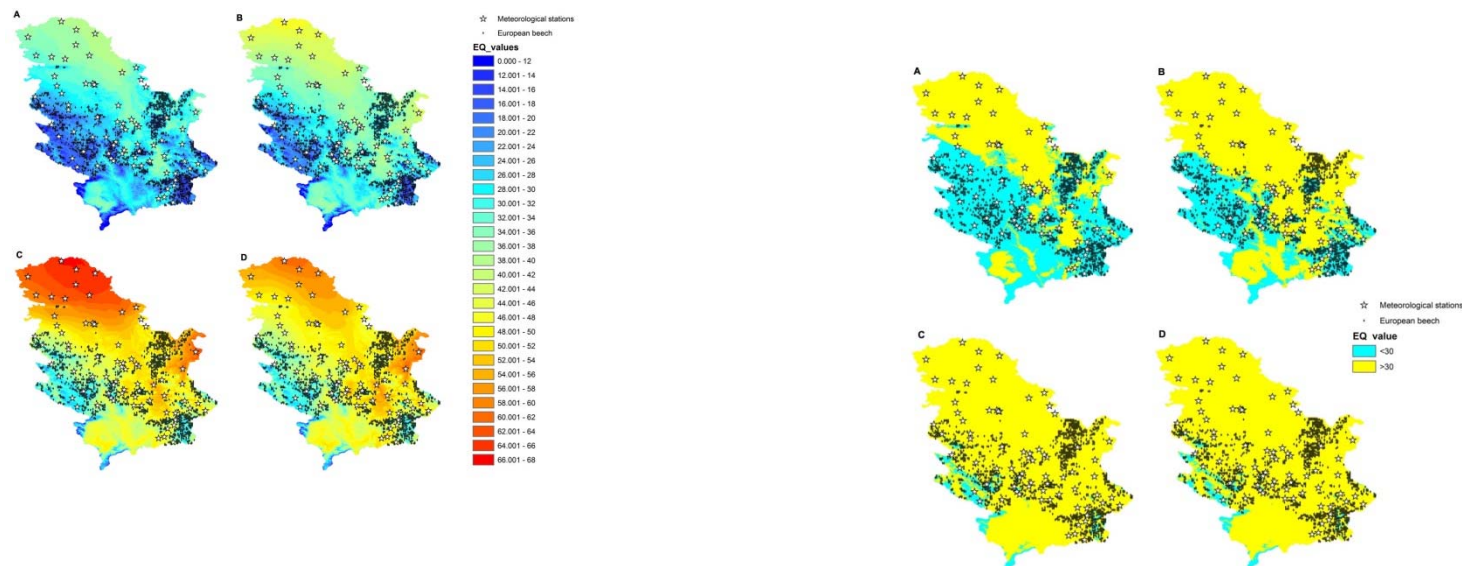

Agricultural and Forest Meteorology 176 (2013) 94–103

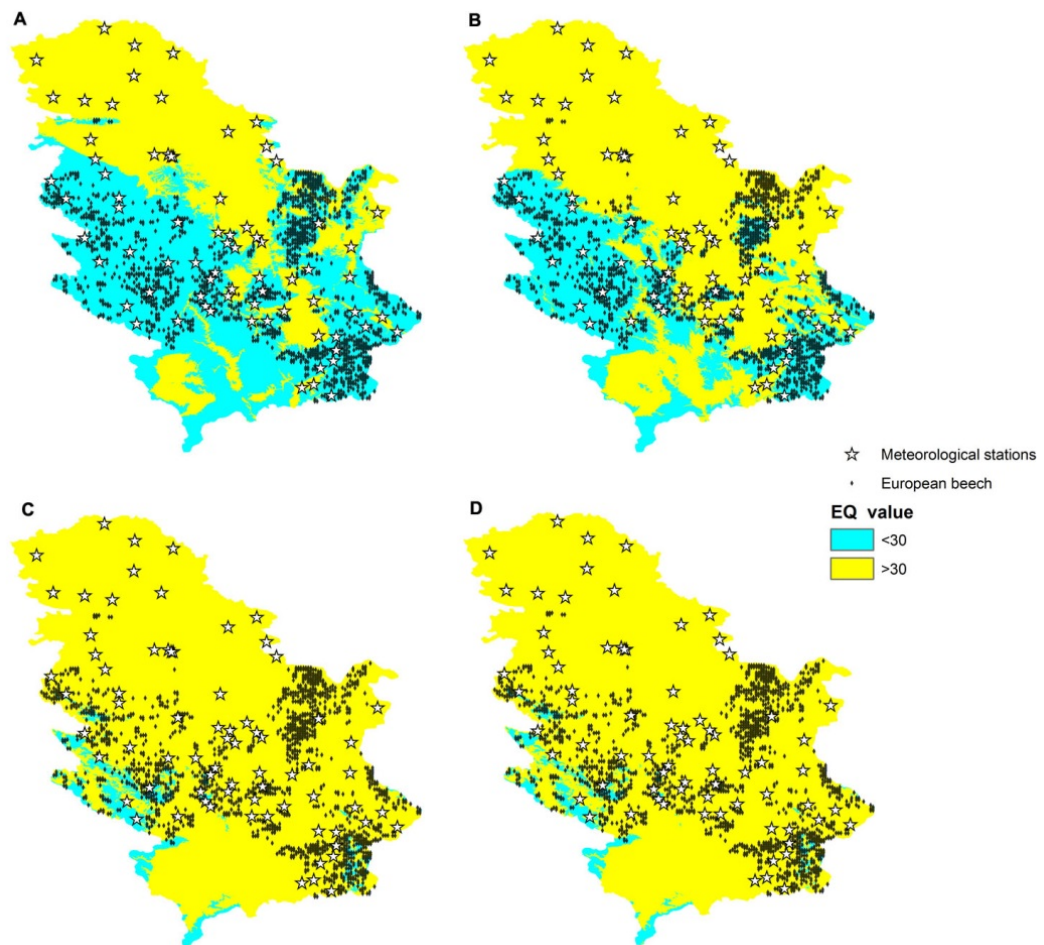

Prediction of the European beech (*Fagus sylvatica* L.) xeric limit using a regional climate model: An example from southeast Europe

CONCLUSIONS - RECOMMANDATIONS

- Improve management of public enterprises and provide adequate institutional (legal) framework
- Pedunculate oak forests
 - Increase the groundwater level in ecosystem if possible
 - Promote regeneration which is closer to nature
 - Promote mixed forests
 - Change of tree species at unsuitable habitats
- Beech forests:
 - Promote continuous cover forestry
 - Promote mixing in the future

Thank
