**CLIMATE OUTLOOK FOR 2010 SUMMER SEASON FOR SERBIA
AND THE SEE REGION**

May 20th 2010

INTRODUCTION

The Republic Hydrometeorological Service of Serbia (RHMS of Serbia) regularly prepares seasonal forecast for our country at the end of the second decade of the month. It is based on subjective analysis of the map products of the following centers:

- European Center for Medium range Weather Forecast, Reading, UK;
- MetOffice, Exeter, UK;
- Meteo-France, Toulouse, France;
- International Research Institute, Columbia University, USA;

From the fall of 2009 we also use model outputs from the South East European Virtual Climate Change Center (SEEVCCC) regional numerical climate model for our seasonal forecasts. All these materials are available on the websites of the centers.

CLIMATE OUTLOOK FOR SUMMER SEASON FOR SERBIA

In major part of Serbia summer season temperature will be above normal. Also, in major part of Serbia summer season precipitations will be within normal, while in the southern and southwestern parts of Serbia summer season precipitations are more likely to be above normal range.

In other words, major part of Serbia will have warm and normally humid summer, while southern and southeastern regions of Serbia will have normally warm and more likely humid summer.

Belgrade, 20.05.2010
