

For Monthly forecast we used analogues methods and forecast of Russian Hydromet.

Monthly mean temperature in June will be near the normal with small negative and positive deviation in some regions.

Precipitation is expected to spread variously in the whole country: In highlands and foothills - above normal, in the rest regions- near the normal.

Such kind of weather conditions are expected in July.

During last 10-15 years, August is the hottest summer month in the country. For 12 years of 15, the mean temperature in August is 1-3 C⁰ above normal. So, we expect this tendency also for August 2010.
