

CLIMATOLOGICAL  
ANALYSIS

SEASON

SUMMER  
2014

Topčić Polje

Mean air temperature during summer 2014. year ranged between 18,3 °C in Drvar and 23,4 °C u Mostar. In the mountain areas mean air temperature ranged between 9,2 °C on Bjelašnica and 15,8 °C on Ivan Sedlo. Temperature deviations from the normal value during the summer, which is for the period (1961-1990) were positive except in Mostar summer was cooler than normal temperatures in summer. Deviation of average temperatures ranged from -0.1°C in Mostar to 1.2°C in Bugojno. By percentage temperature values into the category of normal, warm and very warm. The highest daily air temperature during summer 2014, measuring 36°C was observed on 12 August in Zenica.

Total precipitation in the summer of 2014 were above long-term averages. The maximum deviations from the average rainfall amounts were recorded in Herzegovina. Total precipitation ranged from 276.5 l/m<sup>2</sup> in Sarajevo to 439.5 l/m<sup>2</sup> on Bjelasnica. Deviations from the average amount of precipitation ranged from 114.3% in Sarajevo to 199.9% to Mostar. By percentage amounts of rainfall are classified as a category normally rainy and extremely rainy.
