CLIMATOLOGICAL ANALYSIS OF SEASONE SUMMER 2017.

Sarajevo, October 2017.

Mean air temperatures during the climatological summer 2017 (1st June – 31st August) ranged between 20,8 °C in Bugojno and 27,2°C in Mostar. On the mountain areas air temperatures were in range of 11,9 °C on Bjelasnica to 18,2 °C on Ivan Sedlo. Temperature deviations from normal values during the summer, which covers the period (1961.-1990.), were positive. Deviation of mean temperature from average winter temperature ranged from 2,6 °C on Ivan Sedlo to 4,1 °C in Gradacac. Temperatures are clasified into categories of extremely warm, by percentiles.

Analysis of monthly amount of precipitation expressed in % of average values shows that during the summer 2017, deviations from normal precipitation amounts ranged from 31,7 % in Sanski Most, to 113,6 % in Bugojno. Precipitations are classified into categories of very dry, dry, normal and wet, by percentiles.

Measured amounts of precipitation were in the range of 90,2 mm in Livno to 223,0 mm in Bugojno.

The number of hours of sunshine during the summer of 2017. year, he was on all the observed meteorological stations above normal for the period (1961-1990). Minimum deviation is recorded on MS Sarajevo, where a total of 811 hours of sunshine, and it is up to 109 hours of normal sunshine. Largest anomaly was observed in MS Bihac, where any of 987 hours of sunshine or 273 hours of sunshine than normal for the summer.
