CLIMATOLOGICAL ANALYSIS OF SEASONE SUMMER 2018.

Sarajevo, October 2018.

Mean air temperatures during the climatological summer 2018 (1st June – 31st August) ranged between 19,5 °C in Bugojno and 26,2°C in Neum. On the mountain areas air temperatures were in range of 10,3 °C on Bjelasnica to 16,5 °C on Ivan Sedlo. Temperature deviations from normal values during the summer, which covers the period (1961.-1990.), were positive. Deviation of mean temperature from average winter temperature ranged from 1,0 °C on Ivan Sedlo to 2,7 °C in Stolac i Neum. Temperatures are clasified into categories of very warm and extremely warm, by percentiles.

Analysis of monthly amount of precipitation expressed in % of average values shows that during the summer 2018, deviations from normal precipitation amounts ranged from 82,4 % in Livno, to 159,3,0 % in Zenica. Precipitations are classified into categories of normal and wet and very wet by percentiles.

Measured amounts of precipitation were in the range of 120,3 mm in Neum to 367,1 mm on Bjelašnica.

The number of hours of sunshine during the summer of 2018. year, he was on most observed meteorological stations above normal for the period (1961-1990). Largest negative deviation is recorded on MS Bjelasnica, where a total of 509 hours of sunshine, and it is up to 87 hours less than normal for the year of normal sunshine. Largest anomaly was observed in MS Sanski Most, where any of 803 hours of sunshine or 83 hours of sunshine than normal for the summer.
