

DRAFT VERSION
Twenty-fifth Session of
SOUTHEASTERN EUROPE CLIMATE OUTLOOK FORUM (SEECOF-25)
April-May, 2021

**SEASONAL OUTLOOK FOR SUMMER SEASON 2021 FOR THE SOUTH
EASTERN EUROPE AND CAUCASUS REGION (SEE&C)**

Climate experts from WMO RA VI RCC Network Nodes on long-range forecasting (Meteo France, France and Roshydromet, Russia) and WMO RA VI RCC Network Node on climate monitoring (Deutscher Wetterdienst, Germany), UK Met-Office, Global Producing Centre ECMWF, International Research Institute for Climate and Society (IRI, USA), National Centers for Environmental Prediction (NCEP, USA), WMO RA VI RCC South East Europe Virtual Climate Change Centre (SEEVCCC, Serbia) and National Hydrometeorological Services of SEECOF region provided their valuable contribution to the successful implementation of SEECOF-23 by developing the relevant documents and providing scientific guidance and recommendations.

The SEECOF-25 comprised of the following Steps:

- Step 1: qualitative verification of the SEECOF-24 climate outlook for 2020-2021 Winter;
- Step 2: assessment of the current state of the climate including large-scale climate patterns worldwide and assessments of its likely evolution in the course of the next months;
- Step 3: building the consensus forecast for 2021 summer season.

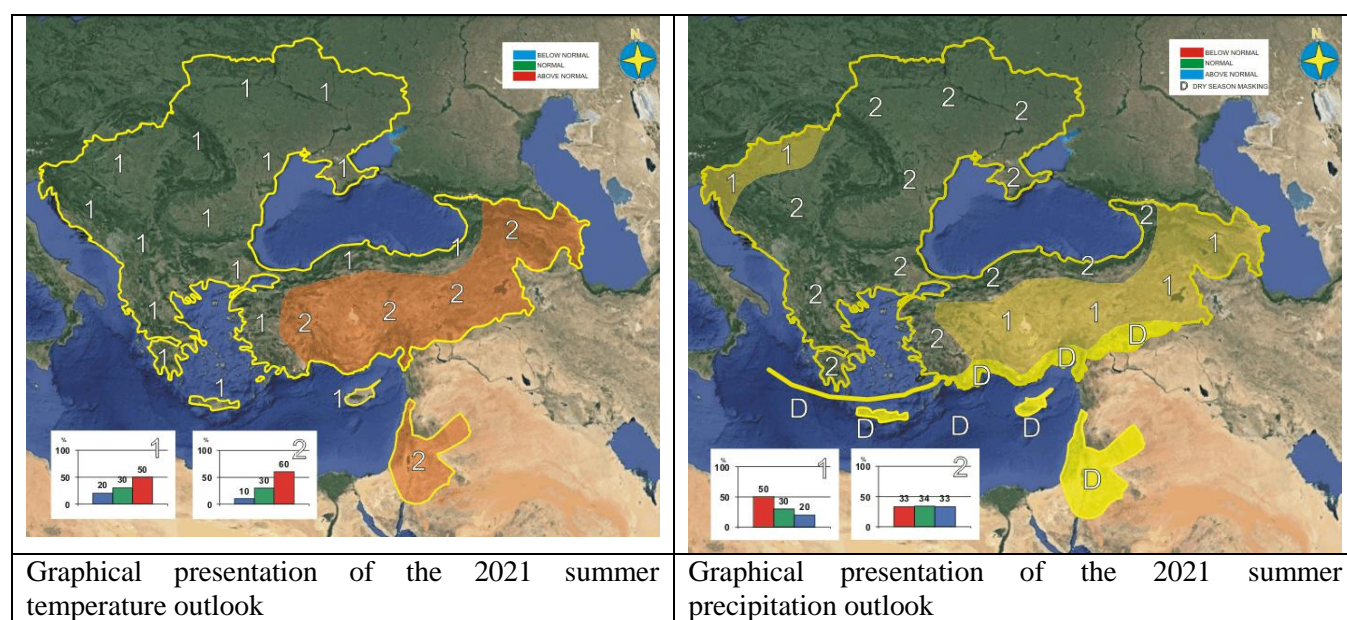

All relevant documentation is posted and updated in SEEVCCC web site: <http://www.seevccc.rs>

SEECOF-25 CLIMATE OUTLOOK FOR THE 2021 SUMMER SEASON

Similarly, to MedCOF-16 seasonal climate outlook, SEECOF-25 prediction is based on the output from dynamical models, including, inter alia, the operational products of the SEEVCCC centre, statistical models and teleconnections of large-scale climate features.

Winter La Nina event has weakened during last months, evolving toward neutral conditions, situation that is expected to continue during summer season. Positive SST anomalies appear over Atlantic Ocean, south of Greenland, and negative ones over North Sea. Within this general context, higher than normal pressures are expected over large parts of Central Europe, and lower than normal over parts of Northern Africa and Middle East.

The maps show the probabilistic consensus forecast for the tercile categories of anomalies for seasonal mean temperature and precipitation, relative to the 1981-2010 period. Due to the climate-warming trend, anomalies are affected by the selected reference period.

Summer temperature in Serbia is likely to be above-normal, while there is no signal for summer precipitation sums. Consequently, the whole Serbia will experience a warmer and normally dry conditions compared to the average.

In almost all SEECOF region (Zone 1 and 2 in Figure 1), summer temperature is likely to be above-normal with the probability increasing from the north-western to the south-eastern and eastern parts of the region. The uncertainty is high for the most of the SEECOF region where probabilities for below-, near- or above-average conditions are approximately equal (Zone 2 in Figure 2). In the Pannonia Plain, western parts of Balkan Peninsula, as well as for South Caucasus region and continental parts of Turkey (Zone 1 in Figure 2) below-normal summer precipitation sums is predicted.

It should be noted that certain parts of the country, particularly mountain regions might receive near- or above-normal summer precipitation totals due to the episodes of enhanced convection accompanied by heavy precipitation. Due to dry season masking, it is not possible to forecast summer precipitation totals along the eastern coasts of Eastern Mediterranean, Crete, Israel and Jordan.

Reference:

The maps show the probabilistic consensus forecast for tercile categories of anomalies of seasonal-mean temperature and precipitation, relative to the 1981-2010 period.

Any further advice on the forecast signals, shorter-range updates and warnings will be available throughout the summer from the National Meteorological Services, along with the details on the methodology and skill of long-range predictions.

** The graphical representation of climate outlook in this statement is for guidance purposes only, and does not imply any opinion whatsoever concerning the legal status of any country, territory, city or area or of its authorities, or concerning the delimitation of its frontiers or boundaries.*
