Climate outlook for summer season 2012 in Armenia

Outlook suggestions based on analog states and global prediction

The analog years for winter (having the smallest distance from winter 2013) wear 1996, 1975, 1991. For territory of Armenia the composites of winter analogs have suggested a spring with close to normal temperature above normal precipitation regime. The spring observations up to now suggest a normal spring of 2013 with normal, above to normal precipitation regime (reference period 1961-1990). The Winter and Spring of year 1996 was the most closest analog for 2013.

	Seasonal Temperature	Seasonal precipitation
Jun	Normal, above normal	above normal, (in south near the normal, below normal)
July	Normal with slight positive deviation	below normal
August	Normal with slight positive deviation	below normal

The summer season temperature in Armenia will be **above normal** to normal),
 The summer season precipitation in Armenia will be **near to normal with negative deviation**.

The mean temperature and precipitation monthly amount in Summer
